

VMWARE ONLINE TRAINING

COURSE CONTENT

Course Content:

Module1

Introduction

Module2

Virtual infrastructure overview

Discussion of virtualization and virtual infrastructure components

Module3

Esx server Installation

setup of Esx server

Module 4

Networking

Configuration of virtual switches, network connections and port groups

Module 5

storage

Storage management technology

Module 6

Virtual center Installation
setup of Virtual center

Module 7

Creation and management of Vm's
use of templates
managing VMware virtual center and web access

Module 8

resource Management
V motion Migration
setting Vm priorities on CPU memory and other resources

Module 9

Virtual Machine access Control
Controlling Administrator Rights

Module 10

Monitoring your Environment
Workload assessment
Service Console monitoring

Module 11

Guidelines and Best practices for a basic deployment
install and configure virtual machines
deploy vm from templates and allocate resources
troubleshoot typical ESX server issues
