

SAP ABAP WORKFLOW ONLINE TRAINING COURSE

CONTENT

What is sapWorkflow?

SAP Workflow ensures “the right work is brought in the right sequence at the right time to the right people”. It is a tool designed to facilitate and automate business processes that require tasks to be performed by people. Ideal for casual or non-SAP users, since all the work items can be performed outside of SAP by simply responding to an email, SAP workflow can be linked to Microsoft Outlook or Lotus Notes.

Each step of a business transaction can be easily monitored and processes are completed from the beginning to the end. Workflow allows process owners to keep an eye on deadlines, provides statistics on the length of time to complete work processes, determine the workload with regard to individual employees and save processing time.
